

Blacklist Alert

Blacklist Alert, from Return Path, alerts you when any of your IP addresses appear on a blacklist.

Know when you're placed on a blacklist. With Return Path's Blacklist Alert you can take fast action to assure your email gets through to the inbox.

How Does Blacklist Alert Help Me?

It's all about reputation. Staying off blacklists is essential to maintaining a strong reputation and superior deliverability. We give you actionable data so you know immediately when there are problems, and we provide information on getting your IPs removed from the blacklist.

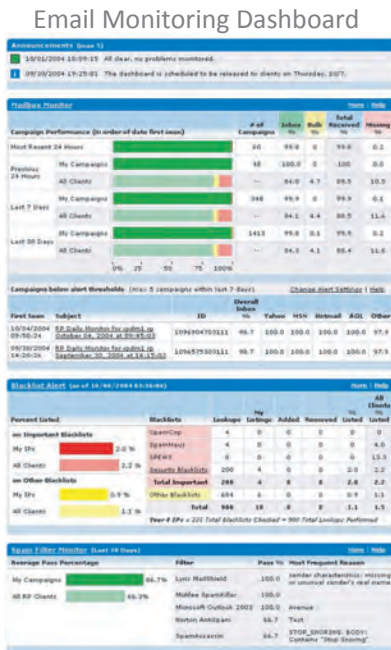

Tell Me More!

Blacklist Alert monitors all your outbound mail server IP addresses. If any of them are added to any of over 180 different blacklists, we alert you via email. You can choose to be alerted regarding all blacklists, or only if your IPs are added to the most important blacklists.

We detail when your IPs were placed on the blacklist and connect you with other information that lets you expedite removal. We archive two years of historical data so you can look at trends and spot recurring problems that may require operational changes.

The Bottom Line.

You get centralized monitoring with your choice of Blacklist Alert summary reports for all your IPs. You can receive daily notification of all lists, daily notification of only the most important lists, or alerts only for change in status. You can also check the status of your IPs at any time, by logging in to our Blacklist Alert website.
